## Production Planning \& Control BMM4823

## Aggregate Planning

by
Dr. Ahmad Nasser Mohd Rose nasser@ump.edu.my

## Chapter Description

- Aims
- To understand the importance of aggregate planning in production planning
- To apply the chase, level and mixed strategy in production planning
- Expected Outcomes
- Able to determine the optimum cost in resources planning
- Able to differentiate between chase, level and mixed strategies
- References
- Heizer, J and Render,B. 2011. Principles of Operations Management, $8^{\text {th }}$ Edition, Pearson Prentice Hall, Inc.

## Introduction

What is an aggregate planning?
The objective of an aggregate planning is to meet a forecasted demand while minimizing cost over the planning period.

## Objectives

## Minimizing the cost over the planning period by controlling

- Level of production
- Number of workers
- Level of Inventory
- Allocation of Overtime
- Subcontracting
- Other controllable variables

## Aggregate planning

The primary focus of aggregate planning;

- Sales volume
- Customer requirement
- Production requirement e.g. rates, capacity
- Inventory
- Backlogs

## Aggregate Planning Structure

Strategic Plan
Vision
Mission
Goals

## Planning horizon

| Short term | Task | Responsible |
| :--- | :--- | :--- |
| Short term <br> Up to 3 months | Work assignments <br> Customer orders <br> Work scheduling <br> Dispatching <br> Overtime <br> Part-time | Production <br> managers, <br> Executive, <br> Supervisors, |
| Intermediate term <br> (3 to 18 month) | In between 3 to 18 months <br> Marketing planning <br> Production planning and budgeting <br> Resources planning <br> Inventory, <br> Subcontracting <br> Analyzing operating plans | Production |
| Managers |  |  |$|$| Long term |
| :--- |
|  |
| Long-range plans <br> (over one year) <br> Research and Development <br> New product plans <br> Capital investments <br> Facility location/expansion |

- Gather all information resources.
- Part of production planning system
- Need to detail out the plan
- Should be transferred into master production plan

## Aggregate Planning

| Jan - Mar |  |  |
| :---: | :---: | :---: |
| Jan | Feb | Mar |
| 160,000 | 130,000 | 120,000 |
| Apr - Jun |  |  |
|  | May | Jun |
| Apr | 150,000 | 170,000 |
| 120,000 | Jul - Sep |  |
|  |  |  |
| Jul | Aug | Sep |
| 175,000 | 145,000 | 135,000 |

Aggregate in product families with utilisation of same resources

## Aggregate Planning

## Aggregate planning strategies

There are strategies to absorb changes by;

1. Using inventories
2. Varying number of workers
3. Hiring part-time worker, overtime, or idle time
4. Appoint subcontractors
5. Price strategies to influence demand

## Capacity option

- Level of Inventory
- Increase inventory to support demand
- High level of inventory will increase other costs such as rental, insurance, space, handling, obsolete and capital investment.
- But if shortages the company will suffer lost sales due to missed delivery and reputation.

## Capacity options

Varying number of workers by using hiring or firing strategies

- Production rate as the demand.
- Cost involved for hiring and firing such as training and etc.

New workers need time to adapt working method and procedures which will cause low productivity.

- Low morale of workers when use firing strategy.

## Capacity options

## Increase production quantity through overtime

- Maintain constant workers
- Trouble to meet high demand
- Overtime will increase cost and may influence productivity
- Idle time will influence production efficiency

## Capacity options

## - Subcontracting

- Applied when there is peak demand
- Too costly compared to overtime
- Uncontrollable quality and delivery

Need frequently follow up and check their production

## Capacity options

## Using part-time workers

- Temporary action to do unskilled job like packaging, visual inspection and etc.
- In servicing also frequently use part timers like restaurant, supermarket and etc.

## Demand options

## Increasing demand

- Offering discount
- Use advertising or promotion
- Production levelling
- Sometime cannot be balanced between production and demand

## Demand options

## Use back order strategy during high demand periods

- Negotiation with customers
- Should offer some initiatives e.g. discount, free delivery
- Might lost sales
- Customer not happy

## Aggregate planning

A mixed strategy is always good for optimising cost.

Can be many possible strategies in mixed method

Finding the optimal plan is not always possible

## Aggregate planning

## Chase strategy

- Always follow the demand by varying workforce size.
- Practiced by many service companies, construction.

## Level strategy

- Production rate is uniform
- Use same rate
- Same number of workers
- Support inventory to fulfil demand

Consistent of quality and productivity

## Graphical methods

Commonly used by the planner
Easy to be understood and implemented
Limited computations

## Graphical Method

1. Check the demand for every period
2. Identify the production capacity for regular time, overtime, and subcontracting each period
3. Identify all costs involved such as labor costs, hiring and firing costs and holding costs

## Example

Always One Sdn Bhd., a special purpose machine manufacturer has developed monthly forecasts for their products. Data for the 6-month period January to June are presented in the following table. The going to use that data for development of an aggregate plan.

Compute the daily production rate for each period

| Month | Demand | Production <br> Days | Demand/ Day <br> (computed) |
| :---: | :---: | :---: | :---: |
| Jan | 900 | 22 | 41 |
| Feb | 700 | 18 | 39 |
| Mar | 800 | 21 | 38 |
| Apr | 1,200 | 21 | 57 |
| May | 1,500 | 22 | 68 |
| June | 1,100 | $\underline{20}$ | 55 |
| Total | 6,200 | 124 |  |

$\begin{gathered}\text { Average } \\ \text { requirement }\end{gathered}=\frac{\text { Total expected demand }}{\text { Number of production days }}$
$=\frac{6,200}{124}=50$ units per day

## Cost Information

| Inventory carrying cost | RM5 per unit per month |
| :--- | :--- |
| Subcontracting cost per unit | RM20 per unit |
| Pay rate | RM10 per hour (RM80 per <br> day) |
| Overtime | RM17 per hour <br> (above 8 hours per day) |
| Labor-hours per unit | 1.6 hours per unit |
| Cost of increasing daily production rate | RM300 per unit |
| Cost of decreasing daily production rate | RM600 per unit |

Inventory carrying cost
Subcontracting cost per unit
Pay rate
Overtime
Labor-hours per unit
Cost of increasing daily production rate
Cost of decreasing daily production rate

RM5 per unit per month
RM20 per unit
RM10 per hour (RM80 per day)
RM17 per hour (above 8 hours per day)
1.6 hours per unit

RM300 per unit
RM600 per unit

Based on the production of 50 units per day. No inventory in hand.

| Mnth | Production <br> Days | Production <br> at 50 Units <br> per Day | Demand <br> Forecast | Monthly <br> Inventory <br> Change | Ending <br> Inventory |
| :--- | :---: | ---: | ---: | :---: | :---: |
| Jan | 22 | 1,100 | 900 | +200 | 200 |
| Feb | 18 | 900 | 700 | +200 | 400 |
| Mar | 21 | 1,050 | 800 | +250 | 650 |
| Apr | 21 | 1,050 | 1,200 | -150 | 500 |
| May | 22 | 1,100 | 1,500 | -400 | 100 |
| June | 20 | 1,000 | 1,100 | -100 | 0 |
|  |  |  |  |  | 1,850 |

## Level strategy

Costs
Inventory carrying
Regular-time labor
Other costs (overtime, hiring, layoffs, subcontracting)
Total cost

Calculations

> | RM9,250 | $\begin{array}{l}\text { (= 1,850 units carried x RM5 } \\ \text { per unit) }\end{array}$ |
| :---: | :--- |
| 99,200 | $\begin{array}{l}\text { (=10 workers x RM80 per } \\ \text { day } \times 124 \text { days) }\end{array}$ |
|  |  |

## Chase strategy

Next strategy is using chase strategy. The production should follow as the demand.

## Chase strategy

| Month | Demand (units) | Daily Prod Rate | Production Cost (demand x 1.6 hrs/unit x RM10/hr) | Extra Cost of Increasing Production (hiring cost) | Extra Cost of Decreasing Production (firing cost) | Total Cost |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Jan | 900 | 41 | RM 14,400 | - | - | RM 14,400 |
| Feb | 700 | 39 | 11,200 | - | $\begin{gathered} \text { RM1,200 } \\ (=2 \times \$ 600) \end{gathered}$ | 12,400 |
| Mar | 800 | 38 | 12,800 | - | $\begin{gathered} \text { RM600 } \\ (=1 \times \$ 600) \end{gathered}$ | 13,400 |
| Apr | 1,200 | 57 | 19,200 | $\begin{gathered} \$ 5,700 \\ (=19 \times \$ 300) \end{gathered}$ | - | 24,900 |
| May | 1,500 | 68 | 24,000 | $\begin{gathered} \$ 3,300 \\ (=11 \times \$ 300) \end{gathered}$ | - | 24,300 |
| June | 1,100 | 55 | 17,600 | - | $\begin{gathered} \text { RM7,800 } \\ (=13 \times \$ 600) \end{gathered}$ | 25,400 |
|  |  |  | RM99,200 | RM9,000 | RM9,600 | RM117,800 |

## Comparison between plans

| Cost | Plan 1 | Plan 2 |  |
| :--- | ---: | ---: | ---: |
| Inventory carrying | RM 9,250 | RM | 0 |
|  |  |  |  |
| Regular labor | 99,200 | 99,200 |  |
| Overtime labor | 0 | 0 | Anyhow you can try |
| Hiring | 0 | 9,000 | with other setting |
| Layoffs | 0 | 9,600 | such minimum |
| Subcontracting | 0 | 0 |  |
| Total cost | RM108,450 | RM117,800 |  |

## Plan 1 is the lowest cost option

## The End
