Section A

- Show the output produced from the following program fragment.

- (1)

```
int i = 22, j = 45, k = 3;
printf("%d", i >> 1 + k << 3 || j);
```
- (2)

```
int a = 1, b = 18, c = 13, d = 21;
printf("%d", a & ~b | c);
```
- (3)

```
int e = 1, f = 18, g = 13;
if ((~e && f) != 1)
    printf("%d", ~g && e ^ f << 0);
else
    printf("%d", g * e | f);
```
- (4)

```
int x = 33, y = 20, z = 15;
if (~x == ~y)
    printf("%d", (y | z) || x);
if ((y | z) || x == 1)
    printf("%d", y + z);
```

Section B

- Answer all questions by circling the correct output of the program. For each question, determine the output on the console monitor.
