

DUM 2413 STATISTICS & PROBABILITY

# CHAPTER 2

## DESCRIPTIVE STATISTICS

PREPARED BY:

DR. CHUAN ZUN LIANG; DR. NORATIKAH ABU; DR. SITI ZANARIAH SATARI  
FACULTY OF INDUSTRIAL SCIENCES & TECHNOLOGY  
chuanzl@ump.edu.my; atikahabu@ump.edu.my; zanariah@ump.edu.my

# CONTENT

2.1

- DATA ORGANISATION AND FREQUENCY DISTRIBUTION

2.2

- TYPES OF GRAPH

2.3

- SUMMARY STATISTICS (DATA DESCRIPTION)

2.4

- EXPLORATORY DATA ANALYSIS

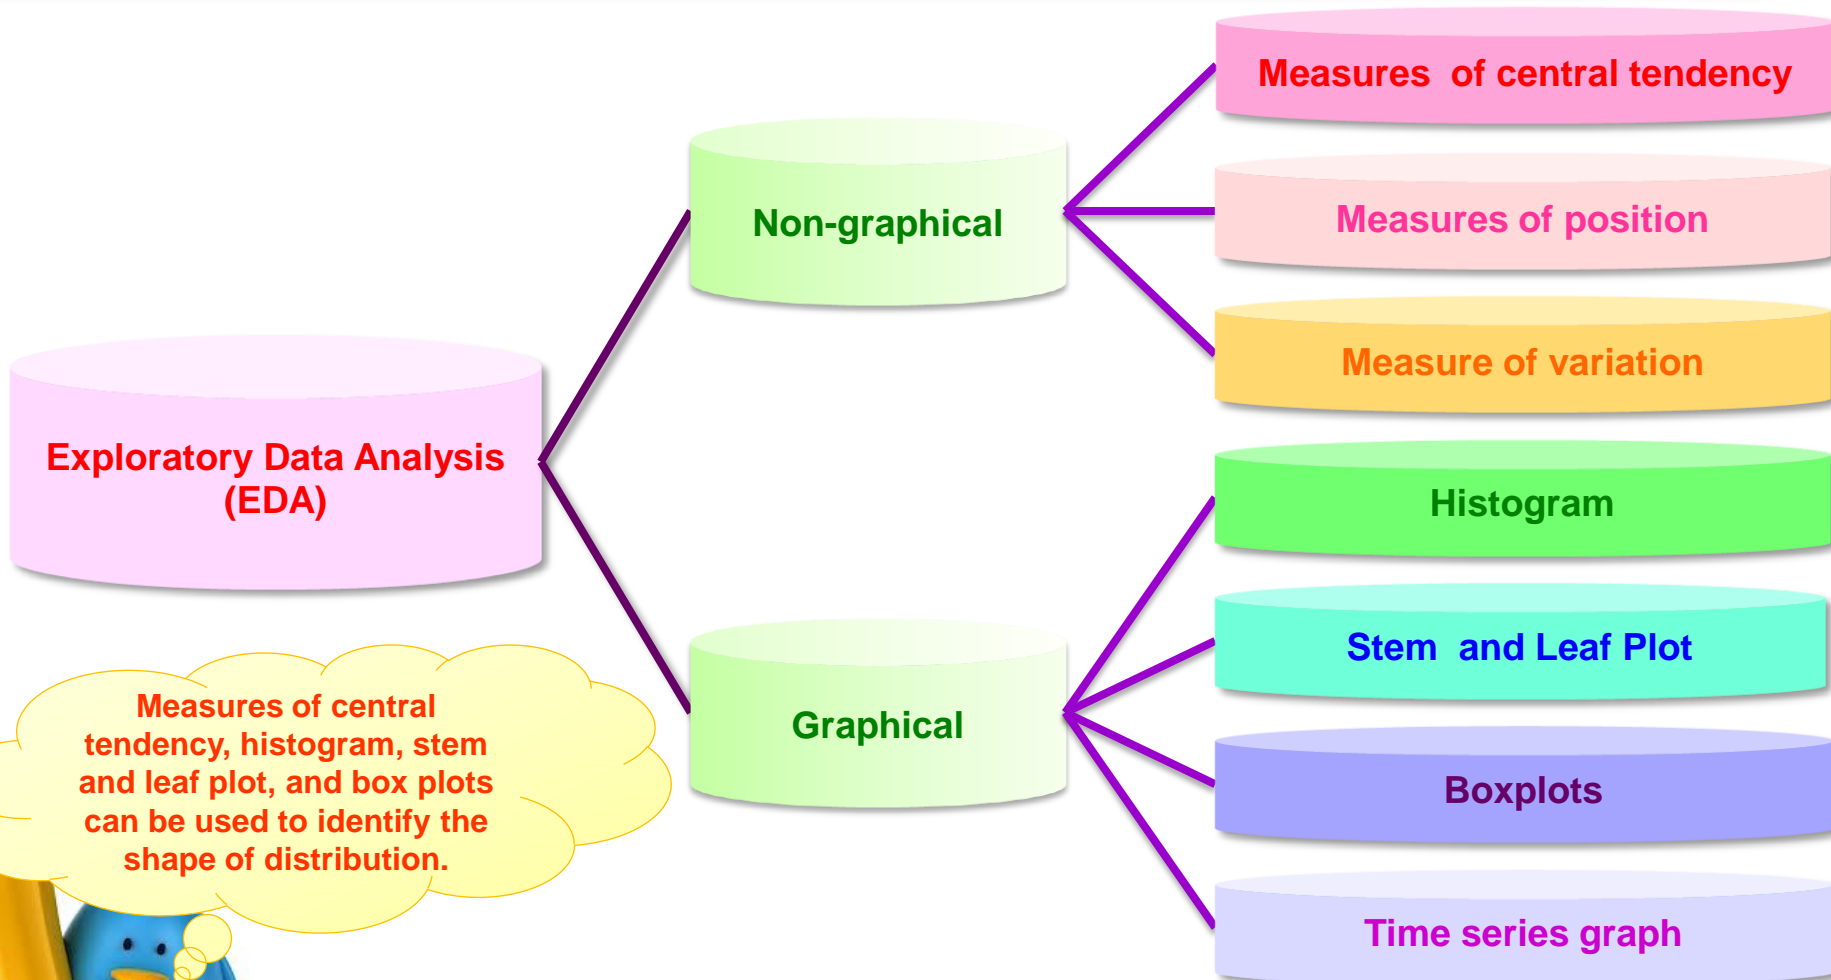

# EXPECTED OUTCOMES

- Able to organise and represent qualitative and quantitative data using an appropriate analysis tool
- Able to differentiate between the grouped and ungrouped data
- Able to summarise the data using non-graphical and graphical exploratory data analysis tools
- Able to apply Chebyshev's Theorem in applications

## 2.3 SUMMARY STATISTICS (DATA DESCRIPTION)

## 2.4 EXPLORATORY DATA ANALYSIS

Exploratory Data Analysis (EDA) is an approach using statistical tools to analyse the data sets in order to summarise or describe their important characteristics.

Measures of central tendency, histogram, stem and leaf plot, and box plots can be used to identify the shape of distribution.

# MEASURES OF CENTRAL TENDENCY (UNGROUPED DATA)

## MEASURES OF CENTRAL TENDENCY

### MEAN

**Population:**

$$\mu = \frac{\sum_{i=1}^N x_i}{N}$$

$N$  = Population size

**Sample:**

$$\bar{x} = \frac{\sum_{i=1}^n x_i}{n}$$

$n$  = Sample size

### MEDIAN

If  $n$  is odd:

$$\text{Median} = x_{\left(\frac{n}{2}\right)}$$

If  $n$  is even:

$$\text{Median} = \frac{x_{\left(\frac{n}{2}\right)} + x_{\left(\frac{n}{2}\right)+1}}{2}$$

### MODE

The mode is the value which has the highest frequency in a data set.

### MIDRANGE

$$\text{Midrange} = \frac{x_{\min} + x_{\max}}{2}$$

where

$x_{\min}$  = lowest value  
(minimum)

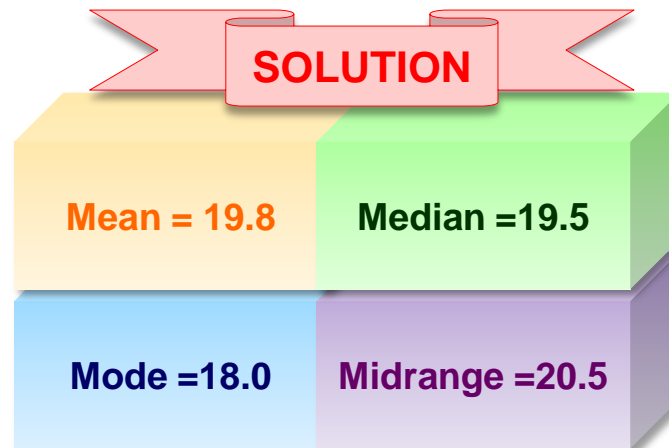

$x_{\max}$  = highest value  
(maximum)

# EXAMPLE 2.7

A sample of 10 students in UMP showed the following credit hours taken during the first year of this program.

17 18 18 18 19 20 21 21 22 24

Compute the mean, median, mode, and midrange.

# MEASURES OF CENTRAL TENDENCY (GROUPED DATA)

## MEASURES OF CENTRAL TENDENCY

### MEAN

$$\text{Mean} = \frac{\sum f_i x_i}{\sum f_i}$$

$x_i$

The midpoint of the  $i$ th class

$f_i$

The corresponding frequency

### MEDIAN

$$\text{Median} = L + \left( \frac{\left(\frac{n}{2}\right) - f_L}{f_{\text{median}}} \right) * C$$

$L_{\text{median}}$

Lower boundary of the median class

$f_L$

Cumulative frequency until point  $L$

$f_{\text{median}}$

Frequency of the class median

$C$

Size of median class

$L_{\text{mode}}$

Lower boundary of the modal class

### MODE

$$\text{Mode} = L_{\text{mode}} + \left( \frac{\lambda_1}{\lambda_1 + \lambda_2} \right) * C_{\text{mode}}$$

$\lambda_2$

Difference between the frequency of the modal class and the next class

$\lambda_1$

Difference between the frequency of the modal class and the previous class

$C_{\text{mode}}$

Size of modal class

# EXAMPLE 2.8

Calculate the mean, mode and median of the following data.

| Height (cm)        | Frequency | Midpoint | Cumulative Frequency |
|--------------------|-----------|----------|----------------------|
| $120 \leq x < 125$ | 1         | 122.5    | 1                    |
| $125 \leq x < 130$ | 3         | 127.5    | 4                    |
| $130 \leq x < 135$ | 6         | 132.5    | 10                   |
| $135 \leq x < 140$ | 12        | 137.5    | 22                   |
| $140 \leq x < 145$ | 17        | 142.5    | 39                   |
| $145 \leq x < 150$ | 18        | 147.5    | 57                   |
| $150 \leq x < 155$ | 15        | 152.5    | 72                   |
| $155 \leq x < 160$ | 5         | 157.5    | 77                   |
| $160 \leq x < 165$ | 2         | 162.5    | 79                   |
| $165 \leq x < 170$ | 1         | 167.5    | 80                   |

## SOLUTION

$$\text{Median} = \left(\frac{80}{2}\right)^{\text{th}} = 40^{\text{th}}$$

Class boundary = 145-150

Mode:

Class boundary = 145-150

## EXAMPLE 2.8-CONTINUE

$$\text{Mean} = \frac{\sum f_i x_i}{\sum f_i} = 144.9375$$

$$\text{Median} = L + \left( \frac{\left( \frac{n}{2} \right) - f_L}{f_m} \right) * C$$

$$L = 145; f_L = 39; f_m = 18; C = 150 - 145 = 5$$

$$= 145 + \left( \frac{\left( \frac{80}{2} \right) - 39}{18} \right) * 5$$
$$= 145.2778$$

$$\text{Mode} = L_{\text{mode}} + \left( \frac{\lambda_1}{\lambda_1 + \lambda_2} \right) * C$$

$$L_{\text{mode}} = 145; \lambda_1 = 18 - 17 = 1; \lambda_2 = 18 - 15 = 3$$

$$= 145 + \left( \frac{1}{1+3} \right) * 5$$
$$= 146.2500$$

# IDENTIFY THE SHAPE OF DISTRIBUTION USING MEASURES OF CENTRAL TENDENCY

Mean < Median  
Mean < Mode

**LEFT-SKEWED DISTRIBUTION**  
Mean < Median < Mode

Median < Mean  
Mode < Mean

**RIGHT-SKEWED DISTRIBUTION**  
Mode < Median < Mean

Mean = Median  
Mean = Mode

**SYMMETRICAL DISTRIBUTION**  
Mean = Median = Mode

# EXAMPLE 2.9

Determine the type of distribution of the following data

(i) 11.6 12.6 12.7 12.8 13.3 13.3 13.6 13.7 13.8 11.4

(ii) Mean=Mode=Median=1

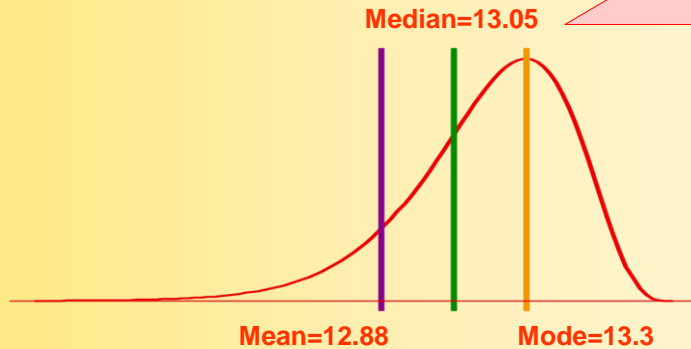

(iii) Mean=25, Mode=13, Median=17

(iv) Mean=5, Mode=73, Median=17

# EXAMPLE 2.9-CONTINUE

## SOLUTION

(i)

**Left-skewed Distribution**  
Reason: Mean < Median < Mode

(ii)

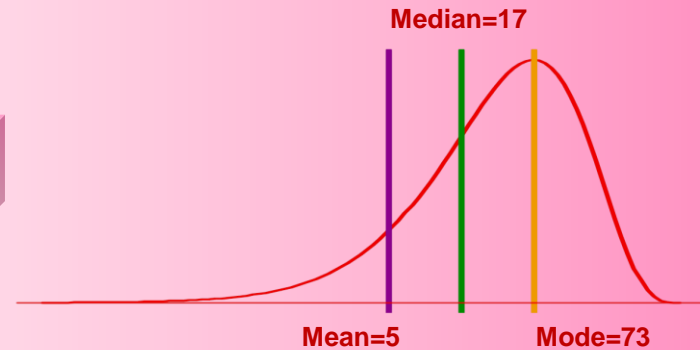

**Symmetrical Distribution**  
Reason: Mean = Median = Mode=1

(iii)

**Right-skewed Distribution**  
Reason: Mode < Median < Mean

(iv)

**Left-skewed Distribution**  
Reason: Mean < Median < Mode

# EXAMPLE 2.10

The table shows the speed of the tracks passing through a hilling road.

| Speed | Frequency | Class Boundary | Midpoint | Cumulative frequency |
|-------|-----------|----------------|----------|----------------------|
| 56-58 | 4         | 55.5-58.5      | 57       | 4                    |
| 59-61 | 12        | 58.5-61.5      | 60       | 16                   |
| 62-64 | 28        | 61.5-64.5      | 63       | 44                   |
| 65-67 | 58        | 64.5-67.5      | 66       | 102                  |
| 68-70 | 44        | 67.5-70.5      | 69       | 146                  |
| 71-73 | 18        | 70.5-73.5      | 72       | 164                  |
| 74-76 | 10        | 73.5-76.5      | 75       | 174                  |

Find the mean, mode and median. Hence, identify the shape of distribution based on measures on central tendency.

## SOLUTION

$$\text{Median} = \left( \frac{174}{2} \right)^{\text{th}} = 87^{\text{th}}$$

$$\text{Class boundary} = 64.5 - 67.5$$

Mode:

$$\text{Class boundary} = 64.5 - 67.5$$

# EXAMPLE 2.10-CONTINUE

$$\text{Mean} = \frac{\sum f_i x_i}{\sum f_i} = 66.7931$$

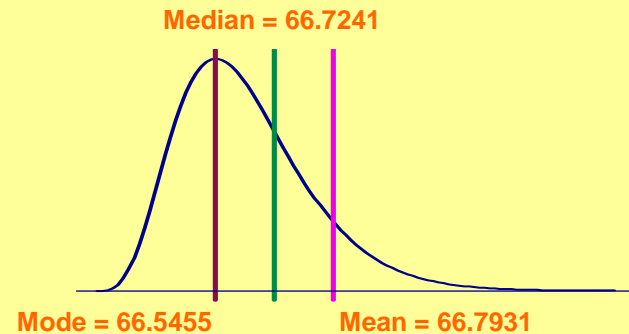

$$\text{Median} = L + \left( \frac{\left( \frac{n}{2} \right) - f_L}{f_m} \right) * C$$

$$L = 64.5; f_L = 44; f_m = 58; C = 67.5 - 64.5 = 3$$

$$= 64.5 + \left( \frac{\left( \frac{174}{2} \right) - 44}{58} \right) * 3$$

$$= 66.7241$$

**Mode < Median < Mean**  
Right-skewed Distribution

$$\text{Mode} = L_{\text{mode}} + \left( \frac{\lambda_1}{\lambda_1 + \lambda_2} \right) * C$$

$$L_{\text{mode}} = 64.5; \lambda_1 = 58 - 28 = 30; \lambda_2 = 58 - 44 = 14$$

$$= 64.5 + \left( \frac{30}{30 + 14} \right) * 3$$

$$= 66.5455$$

# MEASURES OF VARIATION (UNGROUPED DATA)

## MEASURES OF VARIATION

### RANGE

$$\text{Range} = x_{\max} - x_{\min}$$

where

$x_{\min}$  = lowest value  
(minimum)

$x_{\max}$  = highest value  
(maximum)

### VARIANCE

Population

$$\sigma^2 = \frac{\sum_{i=1}^N (x_i - \mu)^2}{N}$$

Sample

$$s^2 = \frac{\sum_{i=1}^N (x_i - \bar{x})^2}{n-1}$$

### STANDARD DEVIATION

Population

$$\sigma = \sqrt{\frac{\sum_{i=1}^N (x_i - \mu)^2}{N}}$$

Sample

$$s = \sqrt{\frac{\sum_{i=1}^N (x_i - \bar{x})^2}{n-1}}$$

### NOTE:

- Variance, ( $\sigma^2/s^2$ ) AND Standard Deviation ( $\sigma/s$ ), can be used to determine the spread and consistency of the data. For example,  $\sigma_A > \sigma_B / s_A > s_B$ , this means sample A is more dispersed/variable compares to sample B.

# EXAMPLE 2.11

Note:

Similar Terms

- Less consistent
- More spread
- More variable
- Large variation
- Less precise
- Less stable

Which of the following set of sample data is more dispersed.

(i)

|   |     |     |     |     |      |      |      |      |      |      |
|---|-----|-----|-----|-----|------|------|------|------|------|------|
| A | 4.2 | 6.7 | 7.3 | 7.5 | 8.0  | 8.5  | 8.7  | 8.8  | 9.2  | 9.3  |
| B | 9.6 | 9.7 | 9.8 | 9.9 | 10.1 | 10.2 | 11.0 | 11.0 | 11.0 | 11.1 |

(ii)

|          |    |    |    |    |    |    |    |    |    |
|----------|----|----|----|----|----|----|----|----|----|
| Method A | 79 | 73 | 78 | 76 | 80 | 75 | 82 | 70 | 77 |
| Method B | 80 | 85 | 78 | 79 | 75 | 73 | 70 | 60 | 65 |

**SOLUTION**

(i)  
Since  $s_A = 1.5296 > s_B = 0.6150$ , therefore data A is more variable compared to B.

(ii)

Since  $s_A = 3.6742 < s_B = 7.8493$ , therefore data of Method B is more variable compared to Method A.

# MEASURES OF VARIATION (GROUPED DATA)

MEASURES OF VARIATION

## VARIANCE

### POPULATION

$$\sigma^2 = \frac{\sum f_i (x_i - \mu)^2}{\sum f_i} = \frac{\sum f_i x_i^2}{\sum f_i} - \left( \frac{\sum f_i x_i}{\sum f_i} \right)^2$$

### SAMPLE

$$s^2 = \frac{\sum f_i (x_i - \bar{x})^2}{\sum f_i - 1} = \frac{\sum f_i x_i^2}{\sum f_i - 1} - \left( \frac{\sum f_i x_i}{\sum f_i - 1} \right)^2$$

## STANDARD DEVIATION

### POPULATION

$$\sigma = \sqrt{\frac{\sum f_i (x_i - \mu)^2}{\sum f_i}} = \sqrt{\frac{\sum f_i x_i^2}{\sum f_i} - \left( \frac{\sum f_i x_i}{\sum f_i} \right)^2}$$

### SAMPLE

$$s = \sqrt{\frac{\sum f_i (x_i - \bar{x})^2}{\sum f_i - 1}} = \sqrt{\frac{\sum f_i x_i^2}{\sum f_i - 1} - \left( \frac{\sum f_i x_i}{\sum f_i - 1} \right)^2}$$

$x_i$  : The midpoint of the  $i$ th class;  $f_i$  : The corresponding frequency

# EXAMPLE 2.12

The table below shows the lifetime (hours) of 112 light bulbs. Find the sample mean, standard deviation and variance of the lifetime of these light bulbs.

| Lifetime (hours)     | Number of bulbs |
|----------------------|-----------------|
| $800 \leq x < 1000$  | 5               |
| $1000 \leq x < 1200$ | 17              |
| $1200 \leq x < 1400$ | 26              |
| $1400 \leq x < 1600$ | 38              |
| $1600 \leq x < 1800$ | 13              |
| $1800 \leq x < 2000$ | 8               |
| $2000 \leq x < 2200$ | 5               |

## SOLUTION

$$\bar{x} = 1444.6429$$

$$s = 281.8342$$

$$s^2 = 79430.5019$$

| Lifetime (hours)     | Midpoint ( $x_i$ ) | Number of bulbs ( $f_i$ ) |
|----------------------|--------------------|---------------------------|
| $800 \leq x < 1000$  | 900                | 5                         |
| $1000 \leq x < 1200$ | 1100               | 17                        |
| $1200 \leq x < 1400$ | 1300               | 26                        |
| $1400 \leq x < 1600$ | 1500               | 38                        |
| $1600 \leq x < 1800$ | 1700               | 13                        |
| $1800 \leq x < 2000$ | 1900               | 8                         |
| $2000 \leq x < 2200$ | 2100               | 5                         |

# THE EMPIRICAL RULE AND CHEBYSHEV'S THEOREM WITH A BELL-SHAPED DISTRIBUTION

1821-1894

## CHEBYSHEV'S THEOREM

The proportion of any distribution that lies within  $k$  standard deviation of the mean is at least  $1 - \frac{1}{k^2}$ , where  $k$  is any positive number greater than 1.

### EXAMPLE: $k = 2$

### EXAMPLE: $k = 3$

Empirical Rule

Chebyshev's Theorem

0.9973  
(Approximately 99.73% of the data)

0.8889  
(At least 88.89% of the data)

Empirical Rule

Chebyshev's Theorem

0.9545  
(Approximately 95.45% of the data)

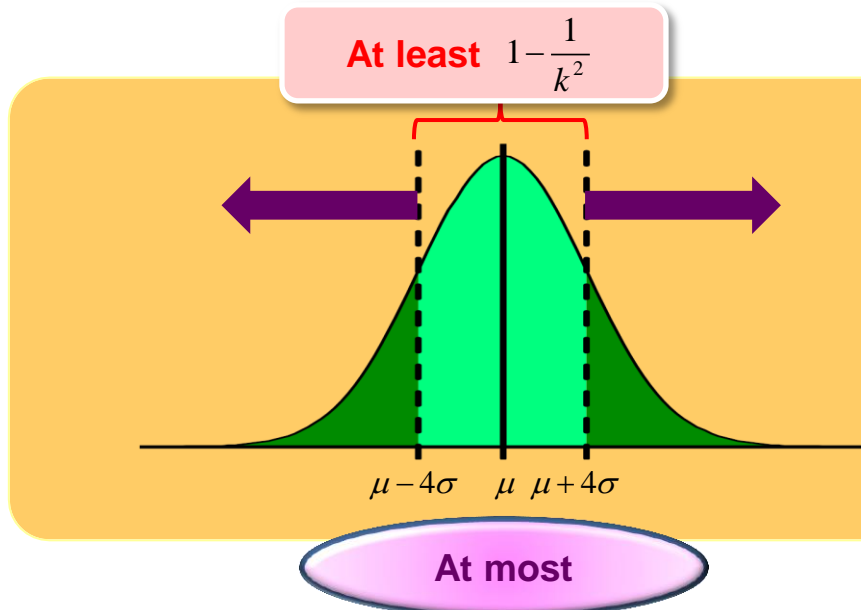

0.7500  
(At least 75% of the data)

# EXAMPLE 2.13

Chebyshev's theorem stated **the proportion** of any distribution that lies within **k standard deviation of the mean**. For instance, when  $k=2$ , it can interpret as “at least 75% of the data fall within 2 standard deviation of the mean. This also equivalent to state that “at most, 25% will be more than 2 standard deviations away from the mean.” At most, what percentage of a distribution will be 4 or more standard deviations from the mean?

**SOLUTION**

In general, we know that the *total area under curve is equal to 1*.

Therefore, the percentage of a distribution will be 4 or more standard deviation from mean:

$$\begin{aligned} &= 1 - \left(1 - \frac{1}{k^2}\right) \\ &= 1 - \left(1 - \frac{1}{4^2}\right) \\ &= 0.0625 \end{aligned}$$

At most 6.25% of a distribution will be 4 or more standard deviations from the mean.

# EXAMPLE 2.14

A lecturer conducted an analysis regarding the students' performance in the subject of DUM 2413 Statistics & Probability. The analysis results showed that the average marks of this subject is 62.7%, with a standard deviation of 13.8%. According to Chebyshev's theorem, at least what percent of the students' performance in the subject of DUM 2413 Statistics & Probability is between 28.2% and 97.2%.

## SOLUTION

$$13.8k = 97.2 - 62.7$$

$$k = 2.5$$

Chebyshev's Theorem

$$= 1 - \frac{1}{k^2}$$

$$= 0.84$$

Therefore, at least 84% of student' performance in subject of DUM 2413 Statistics & Probability is between 28.2% and 97.2%.

# MEASURES OF POSITION (UNGROUPED DATA)

## MEASURES OF POSITION

### QUARTILES

Split data into 4 equal parts

$$Q_i = x_c = x_{\frac{in}{4}}$$

### DECILES

Split data into 10 equal parts

$$D_i = x_c = x_{\frac{in}{10}}$$

### PERCENTILES

Split data into 100 equal parts

$$P_i = x_c = x_{\frac{in}{100}}$$

If  $c$  is not a whole number, round it up to the next whole number.

If  $c$  a whole number, then use  $Q_i, D_i, P_i \approx \frac{x_c + x_{c+1}}{2}$ .

# EXAMPLE 2.15

A manufacturing company has 550 operators. A random sample of 11 operators is randomly selected and the numbers of sick leave (in days) last year for these operators are recorded as shown below.

|   |   |   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|---|---|
| 3 | 6 | 1 | 4 | 4 | 2 | 5 | 1 | 7 | 2 | 4 |
|---|---|---|---|---|---|---|---|---|---|---|

- (i) Calculate the first, second and third quartile.  
(Note: second quartile equivalent to median)

|   |   |   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 1 | 2 | 2 | 3 | 4 | 4 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|---|---|---|

$$Q_1 = x_{\frac{1(11)}{4}} = x_{2.75} \approx x_3 = 2; Q_2 = x_{\frac{2(11)}{4}} = x_{5.5} \approx x_6 = 4; Q_3 = x_{\frac{3(11)}{4}} = x_{8.25} \approx x_9 = 5$$

- (ii) Calculate the 25%, 50% and 75% percentile.

$$P_{25} = x_{\frac{25(11)}{100}} = x_{2.75} \approx x_3 = 2; P_{50} = x_{\frac{50(11)}{100}} = x_{5.5} \approx x_6 = 4; Q_{75} = x_{\frac{75(11)}{100}} = x_{8.25} \approx x_9 = 5$$

# EXAMPLE 2.16

## 1. Given

|   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|
| 9 | 2 | 1 | 4 | 3 | 7 | 5 | 4 | 6 |
| 1 | 2 | 3 | 4 | 4 | 5 | 6 | 7 | 9 |

- (i) Find the value correspond to 4<sup>th</sup> deciles.  
(ii) Find the value correspond to 3<sup>rd</sup> quartiles.

$$(i) D_4 = x_{\frac{4(9)}{10}} = x_{3.6} \approx x_4 = 4$$

$$(ii) Q_3 = x_{\frac{3(9)}{4}} = x_{6.75} \approx x_7 = 6$$

## 2. Given

|   |    |    |    |    |   |   |    |    |    |
|---|----|----|----|----|---|---|----|----|----|
| 9 | 22 | 11 | 14 | 13 | 3 | 7 | 15 | 18 | 16 |
|---|----|----|----|----|---|---|----|----|----|

- (i) Find the value correspond to 20<sup>th</sup> percentiles.  
(ii) Find the value correspond to 7<sup>th</sup> deciles.

|   |   |   |    |    |    |    |    |    |    |
|---|---|---|----|----|----|----|----|----|----|
| 3 | 7 | 9 | 11 | 13 | 14 | 15 | 16 | 18 | 22 |
|---|---|---|----|----|----|----|----|----|----|

$$(i) P_{20} = x_{\frac{20(10)}{100}} = x_2 \approx \frac{x_2 + x_3}{2} = 8$$

$$b) D_7 = x_{\frac{7(10)}{10}} = x_7 \approx \frac{x_7 + x_8}{2} = 15.5$$

# MEASURES OF POSITION (GROUPED DATA)

## QUARTILES

$$Q_i = L_i + \left( \frac{(in/4) - f_L}{f_i} \right) * C; i = 1, 2, 3$$

$$n = \sum f_i$$

$L_i$

Lower boundary of the class  $Q_i$  lies

## DECILES

$$D_i = L_i + \left( \frac{(in/10) - f_L}{f_i} \right) * C; i = 1, 2, \dots, 10$$

$f_L$

Cumulative frequency until point  $L_i$

$f_i$

Frequency of the class where  $Q_i$  lies

$C$

Size of the class where  $Q_i$  lies

## PERCENTILES

$$P_i = L_i + \left( \frac{(in/100) - f_L}{f_i} \right) * C; i = 1, 2, \dots, 99$$

MEASURES OF POSITION

# EXAMPLE 2.17

The frequency distribution depicted the times taken for 70 workers to complete a single challenging task assigned by their manager.

| Time (min)       | Number of workers |
|------------------|-------------------|
| $20 \leq x < 25$ | 10                |
| $25 \leq x < 30$ | 8                 |
| $30 \leq x < 35$ | 9                 |
| $35 \leq x < 40$ | 18                |
| $40 \leq x < 45$ | 21                |
| $45 \leq x < 50$ | 4                 |

Determine  $Q_1$ ,  $D_3$  and  $P_{75}$ .

## SOLUTION

| Time (min)       | Number of workers | Cumulative Frequency |
|------------------|-------------------|----------------------|
| $20 \leq x < 25$ | 10                | 10                   |
| $25 \leq x < 30$ | 8                 | 18                   |
| $30 \leq x < 35$ | 9                 | 27                   |
| $35 \leq x < 40$ | 18                | 45                   |
| $40 \leq x < 45$ | 21                | 66                   |
| $45 \leq x < 50$ | 4                 | 70                   |

# EXAMPLE 2.17-CONTINUE

$$Q_i = L_i + \left( \frac{\left( \frac{in}{4} \right) - f_L}{f_i} \right) * C$$

$$L_i = 25; n = 70; f_L = 10; f_i = 8; C = 30 - 25 = 5$$

$$Q_1 = 25 + \left( \frac{\left( \frac{1 * 70}{4} \right) - 10}{8} \right) * 5$$

$$= 29.6875$$

$$D_i = L_i + \left( \frac{\left( \frac{in}{10} \right) - f_L}{f_i} \right) * C$$

$$L_i = 30; n = 70; f_L = 18; f_i = 9; C = 35 - 30 = 5$$

$$D_3 = 30 + \left( \frac{\left( \frac{3 * 70}{10} \right) - 18}{9} \right) * 5$$

$$= 31.6667$$

$$D_3 = \left( \frac{3}{10} * 70 \right) \text{th} = 21\text{th}$$

Class boundary = 30 - 35

$$D_i = L_i + \left( \frac{\left( \frac{in}{10} \right) - f_L}{f_i} \right) * C$$

$$L_i = 40; n = 70; f_L = 45; f_i = 21; C = 45 - 40 = 5$$

$$P_{75} = 40 + \left( \frac{\left( \frac{75 * 70}{100} \right) - 45}{21} \right) * 5$$

$$= 41.7857$$

$$P_{75} = \left( \frac{75}{100} * 70 \right) \text{th} = 52.5\text{th} \approx 53\text{th}$$

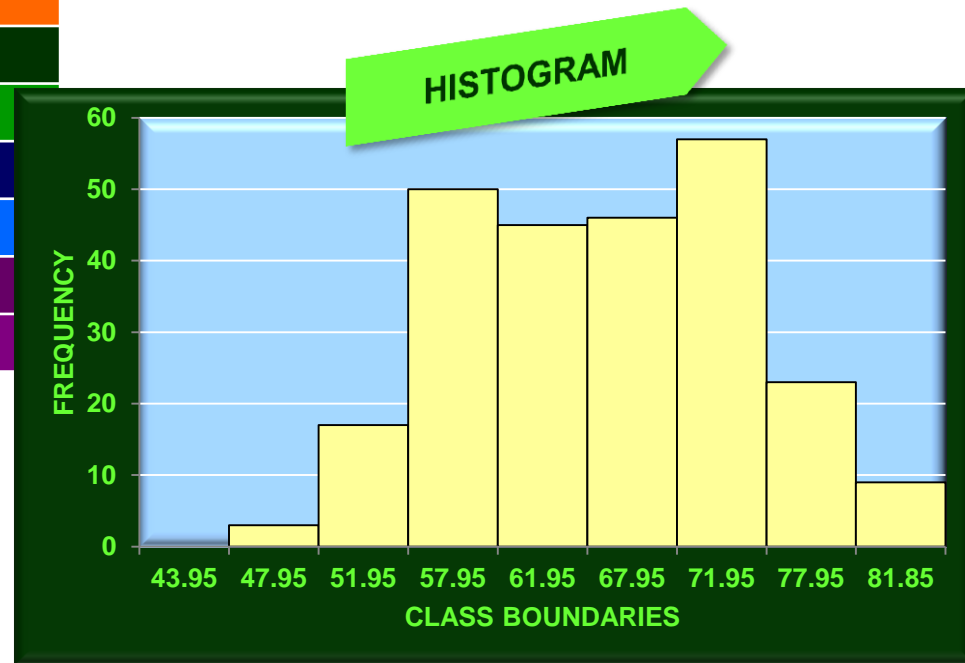

Class boundary = 40 - 50

# HISTOGRAM

Histogram is a **bar graph** that represents a frequency distribution of a quantitative variable.

EXAMPLE: The weight of 250 sacks of durian (in kg)

| Weight (kg) | Number of sacks of durian |
|-------------|---------------------------|
| 44.0-47.9   | 3                         |
| 48.0-51.9   | 17                        |
| 52.0-57.9   | 50                        |
| 58.0-61.9   | 45                        |
| 62.0-67.9   | 46                        |
| 68.0-71.9   | 57                        |
| 72.0-77.9   | 23                        |
| 78.0-81.9   | 9                         |

# HISTOGRAM

J-SHAPE

REVERSE J

# EXAMPLE 2.18

The traffic police observed the speeds of 55 cars passing through an accident crime scene in a village using radar device.

|    |    |    |    |    |    |    |    |    |    |    |
|----|----|----|----|----|----|----|----|----|----|----|
| 27 | 23 | 22 | 38 | 43 | 24 | 35 | 26 | 28 | 18 | 20 |
| 25 | 23 | 22 | 52 | 31 | 30 | 41 | 45 | 29 | 27 | 43 |
| 29 | 28 | 27 | 25 | 29 | 28 | 24 | 37 | 28 | 29 | 18 |
| 26 | 33 | 25 | 27 | 25 | 34 | 32 | 36 | 22 | 32 | 33 |
| 21 | 23 | 24 | 18 | 48 | 23 | 16 | 38 | 26 | 21 | 23 |

- (i) Classify these data into a grouped frequency distribution using class boundaries 12-18, 18-24, ..., 48-54.
- (ii) Find the class width.
- (iii) For the class 24-30, find the class midpoint, the lower and upper class boundaries.
- (iv) Construct a frequency histogram of these data. Then, identify the shape of distribution.

# EXAMPLE 2.18-CONTINUE

## SOLUTION

(i)

| Class limits | Frequency |
|--------------|-----------|
| 12-18        | 1         |
| 18-24        | 14        |
| 24-30        | 22        |
| 30-36        | 8         |
| 36-42        | 5         |
| 42-48        | 3         |
| 48-54        | 2         |

(ii) Class width =  $18 - 12 = 6$

(iii)

$$\text{Midpoint} = \frac{24 + 30}{2} = 27$$

Lower class boundaries = 24

Upper class boundaries = 30

**Right-skewed distribution**

# STEM AND LEAF PLOT

A stem and leaf plot displays the data of a sample using the actual digits that make up the data values.

## EXAMPLE:

The response times of 30 integrated circuits (in picoseconds)

|     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|
| 4.6 | 4.0 | 3.7 | 4.1 | 4.1 | 5.6 |
| 4.5 | 6.0 | 6.0 | 3.4 | 3.4 | 4.6 |
| 3.7 | 4.2 | 4.6 | 4.7 | 4.1 | 3.7 |
| 3.4 | 3.3 | 3.7 | 4.1 | 4.5 | 4.6 |
| 4.4 | 4.8 | 4.3 | 4.4 | 5.1 | 3.9 |

| Stem | Leaf                          | Key: 3 0 means 3.0 |
|------|-------------------------------|--------------------|
| 3    | 3 4 4 4 7 7 7 7 9             |                    |
| 4    | 0 1 1 1 1 2 3 4 4 5 5 6 6 6 6 |                    |
| 5    | 1 6                           |                    |
| 6    | 0 0                           |                    |

Stem and leaf plot

Back-to-back stem and leaf plot

## EXAMPLE:

The heat rates for two different groups

### GROUP 1

|     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 115 | 115 | 117 | 126 | 127 | 127 | 128 | 128 | 129 | 129 |
| 129 | 129 | 130 | 134 | 134 | 136 | 136 | 140 | 142 | 144 |

### GROUP 2

|     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 125 | 125 | 126 | 134 | 136 | 138 | 138 | 142 | 143 | 146 |
| 146 | 147 | 148 | 148 | 153 | 155 | 155 | 157 | 162 | 164 |

| Group 1           | Stem | Group 2       |
|-------------------|------|---------------|
| 7 5 5             | 11   |               |
| 9 9 9 9 8 8 7 7 6 | 12   | 5 5 6         |
| 6 6 4 4 0         | 13   | 4 6 8 8       |
| 4 2 0             | 14   | 2 3 6 6 7 8 8 |
|                   | 15   | 3 5 5 7       |
|                   | 16   | 2 4           |

Key: 11|5 means 115

# EXAMPLE 2.19

The following data show the 22 final examination marks for DUM 2413 Statistics & Probability course.

|    |    |    |    |    |    |    |    |    |    |    |
|----|----|----|----|----|----|----|----|----|----|----|
| 44 | 52 | 70 | 75 | 53 | 44 | 52 | 66 | 57 | 79 | 83 |
| 68 | 94 | 66 | 59 | 45 | 69 | 48 | 53 | 80 | 95 | 44 |

Construct the stem-and-leaf plot for the data. Then, identify the distribution.

## SOLUTION

| Stem | Leaf        | Key: 4 4 means 44 |
|------|-------------|-------------------|
| 4    | 4 4 4 5 8   |                   |
| 5    | 2 2 3 3 7 9 |                   |
| 6    | 6 6 8 9     |                   |
| 7    | 0 5 9       |                   |
| 8    | 0 3         |                   |
| 9    | 4 5         |                   |

**SHAPE OF DISTRIBUTION: RIGHT-SKEWED DISTRIBUTION**

# EXAMPLE 2.20

The data shown represents the sample of percentage of unemployment in a particular country according to gender. Construct a back-to-back (mixture) stem and leaf plot. Then, compare the distribution of the two groups.

|                |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |
|----------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| <b>Females</b> | 4.9 | 5.0 | 5.3 | 5.5 | 5.6 | 5.6 | 5.8 | 6.1 | 6.3 | 6.6 | 6.7 | 7.1 | 7.4 | 7.6 | 6.9 |
| <b>Males</b>   | 2.1 | 2.3 | 2.3 | 2.7 | 3.0 | 3.3 | 3.3 | 3.6 | 3.7 | 3.9 | 4.2 | 4.2 | 4.4 | 4.5 | 5.6 |

| Females |   |   |   |   |   | Stem | Males |   |   |   |   |   |  |  |  |
|---------|---|---|---|---|---|------|-------|---|---|---|---|---|--|--|--|
|         |   |   |   |   |   | 2    | 1     | 3 | 3 | 7 |   |   |  |  |  |
|         |   |   |   |   |   | 3    | 0     | 3 | 3 | 6 | 7 | 9 |  |  |  |
|         |   |   |   |   | 9 | 4    | 2     | 2 | 4 | 5 |   |   |  |  |  |
| 8       | 6 | 6 | 5 | 3 | 0 | 5    | 6     |   |   |   |   |   |  |  |  |
|         | 9 | 7 | 6 | 3 | 1 | 6    |       |   |   |   |   |   |  |  |  |
|         |   |   | 6 | 4 | 1 | 7    |       |   |   |   |   |   |  |  |  |

Key: 2|1 means 21

**RIGHT-SKEWED DISTRIBUTION**

**RIGHT-SKEWED DISTRIBUTION**

# BOXPLOT

A boxplot is a graphic representation of the 5-number summaries (minimum, first quartile, median (second quartile), third quartile and maximum).

EXAMPLE: FICO credit rating scores

|     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|
| 547 | 693 | 698 | 714 | 751 | 753 |
| 779 | 789 | 802 | 818 | 834 | 976 |

Boxplot

# PROCEDURE FOR CONSTRUCTING A BOXPLOT

## STEP 1

Arrange the data in ascending order.

## STEP 2

Find the 1<sup>st</sup> quartile,  $Q_1$ , 2<sup>nd</sup> quartile (median),  $Q_2$ , and 3<sup>rd</sup> quartile,  $Q_3$ .

## STEP 3

Find the outliers (extreme values → extremely low/extremely high).

$$x < Q_1 - 1.5(Q_3 - Q_1) \text{ or } x > Q_3 + 1.5(Q_3 - Q_1)$$

## STEP 4

Draw a scale for the data on the x-axis.

*IQR (Interquartile Range)*

\*Note: The larger value of IQR, the larger of variability

## STEP 5

Locate the minimum value, 1<sup>st</sup> quartile, 2<sup>nd</sup> quartile (median), 3<sup>rd</sup> quartile, the maximum value, and outliers on the scale.

## STEP 6

Draw a box around 1<sup>st</sup> quartile and 3<sup>rd</sup> quartile, draw a vertical line through the median, and connect the upper and lower value.

# EXAMPLE 2.21

Plot a box-plot for the following data. Then describe the shape of distribution.

- a. 3.2 5.9 4.3 6.9 4.5 8.0 4.7 8.9 5.7 11.9  
b. 5.8 9.7 6.7 13.4 6.8 14.7 7.2 16.4 8.2 28.1

SOLUTION

## STEP 1

Arrange the data.

3.2 4.3 4.5 4.7 5.7 5.9 6.9 8.0 8.9 11.9

## STEP 2

Find the 1<sup>st</sup> quartile, 2<sup>nd</sup> quartile (median) and 3<sup>rd</sup> quartile.

$$Q_1 = x_{c=\frac{1(10)}{4}=2.5} \Rightarrow x_3 = 4.5$$

$$Q_2 = x_{c=\frac{2(10)}{4}=5} \Rightarrow \frac{x_5 + x_6}{2} = \frac{5.7 + 5.9}{2} = 5.8$$

$$Q_3 = x_{c=\frac{3(10)}{4}=7.5} \Rightarrow x_8 = 8.0$$

# EXAMPLE 2.21-CONTINUE

## STEP 3

Find the outliers.

$$\text{Lower Limit : } Q_1 - 1.5(Q_3 - Q_1) = 4.5 - 1.5(8.0 - 4.5) = -0.75$$

$$\text{Upper Limit : } Q_3 - 1.5(Q_3 - Q_1) = 8.0 - 1.5(8.0 - 4.5) = 13.25$$

Since the smallest value is 3.2 and the largest value is 11.9.  
Therefore, no outlier exists in this data set.

## STEP 4

Draw a scale for the data on the x-axis.

## STEP 5

Locate the minimum value, 1<sup>st</sup> quartile, 2<sup>nd</sup> quartile (median), 3<sup>rd</sup> quartile, the maximum value, and outliers on the scale.

## STEP 6

Draw a box around 1<sup>st</sup> quartile and 3<sup>rd</sup> quartile, draw a vertical line through the median, and connect the upper and lower value.

# EXAMPLE 2.21-CONTINUE

SHAPE OF DISTRIBUTION: RIGHT-SKEWED DISTRIBUTION

# EXAMPLE 2.21-CONTINUE

Plot a box-plot for the following data. Then describe the shape of distribution.

- a. 3.2 5.9 4.3 6.9 4.5 8.0 4.7 8.9 5.7 11.9  
b. 5.8 9.7 6.7 13.4 6.8 14.7 7.2 16.4 8.2 28.1

## SOLUTION

### STEP 1

Arrange the data.

5.8 6.7 6.8 7.2 8.2 9.7 13.4 14.7 16.4 28.1

### STEP 2

Find the 1<sup>st</sup> quartile, 2<sup>nd</sup> quartile (median) and 3<sup>rd</sup> quartile.

$$Q_1 = x_{c=\frac{1(10)}{4}=2.5} \Rightarrow x_3 = 6.8$$

$$Q_2 = x_{c=\frac{2(10)}{4}=5} \Rightarrow \frac{x_5 + x_6}{2} = \frac{8.2 + 9.7}{2} = 8.95$$

$$Q_3 = x_{c=\frac{3(10)}{4}=7.5} \Rightarrow x_8 = 14.7$$

# EXAMPLE 2.21-CONTINUE

## STEP 3

Find the outliers.

$$\text{Lower Limit : } Q_1 - 1.5(Q_3 - Q_1) = 6.8 - 1.5(14.7 - 6.8) = -5.05$$

$$\text{Upper Limit : } Q_3 - 1.5(Q_3 - Q_1) = 14.7 - 1.5(14.7 - 6.8) = 26.55$$

Since the smallest value is 5.8 and the largest value is 28.1.  
Therefore, outlier in this data set is 28.1 ( $x = 28.1$ ) > (Upper limit = 26.55).

## STEP 4

Draw a scale for the data on the x-axis.

## STEP 5

Locate the minimum value, 1<sup>st</sup> quartile, 2<sup>nd</sup> quartile (median), 3<sup>rd</sup> quartile, the maximum value, and outliers on the scale.

## STEP 6

Draw a box around 1<sup>st</sup> quartile and 3<sup>rd</sup> quartile, draw a vertical line through the median, and connect the upper and lower value.

# EXAMPLE 2.21-CONTINUE

SHAPE OF DISTRIBUTION: RIGHT-SKEWED DISTRIBUTION

# EXAMPLE 2.22

Two sample of ten spring made out of the steel rods supplied by two different companies were compared. The measurement of flexibility (in N/m) for each spring was recorded as follows.

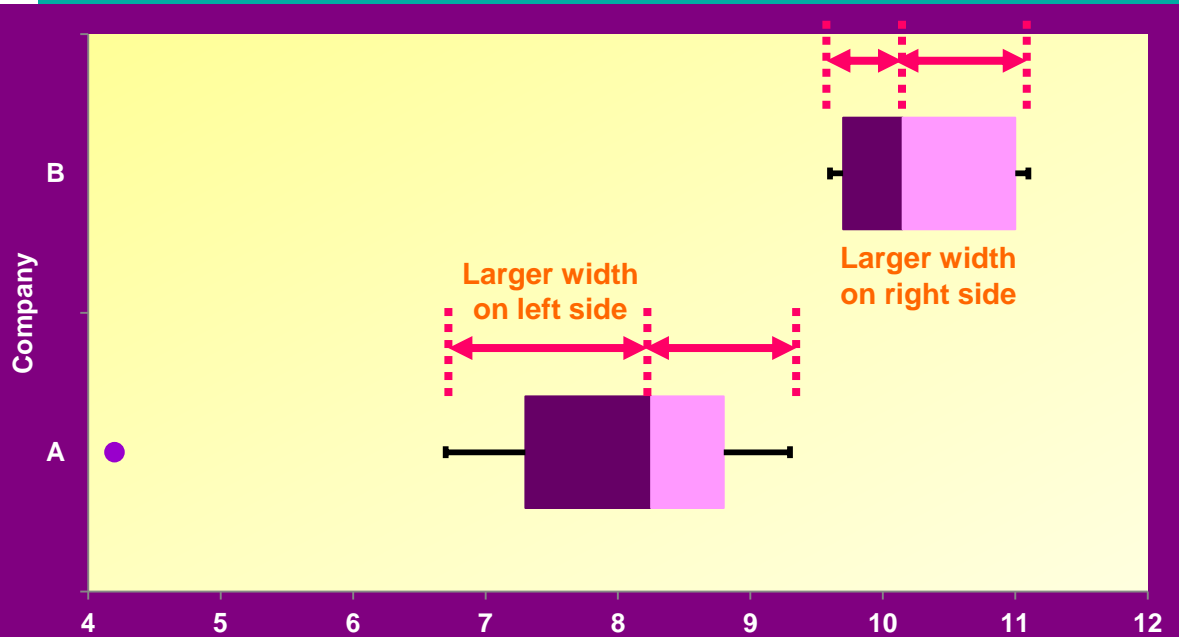

|           |     |     |     |     |      |      |      |      |      |      |
|-----------|-----|-----|-----|-----|------|------|------|------|------|------|
| Company A | 4.2 | 6.7 | 7.3 | 7.5 | 8.0  | 8.5  | 8.7  | 8.8  | 9.2  | 9.3  |
| Company B | 9.6 | 9.7 | 9.8 | 9.9 | 10.1 | 10.2 | 11.0 | 11.0 | 11.0 | 11.1 |

Compare the distributions, average and variation of both data using boxplots.

## SOLUTION

| Company                  | A                    | B          |
|--------------------------|----------------------|------------|
| Minimum                  | 6.7                  | 9.6        |
| 1 <sup>st</sup> Quartile | 7.3                  | 9.8        |
| 2 <sup>nd</sup> Quartile | 8.25                 | 10.15      |
| 3 <sup>rd</sup> Quartile | 8.8                  | 11.0       |
| Maximum                  | 9.3                  | 11.1       |
| Outlier                  | 1st observation: 4.2 | No outlier |
| <i>Upper Limit</i>       | 5.05                 | 8.00       |
| <i>Lower Limit</i>       | 11.05                | 12.8       |

# EXAMPLE 2.22-CONTINUE

## SHAPE OF DISTRIBUTION:

Company A: *Left-skewed distribution*; Company B: *Right-skewed distribution*

## AVERAGE:

Data of Company B has higher average compared to Company A. This is due to

$$(\text{Median}_B = 10.15) > (\text{Median}_A = 8.25)$$

## VARIATION:

Data of Company A is more variable compared to Company B. This is due to

$$(IQR_A = 8.8 - 7.3 = 1.5) > (IQR_B = 11.0 - 9.8 = 1.2)$$

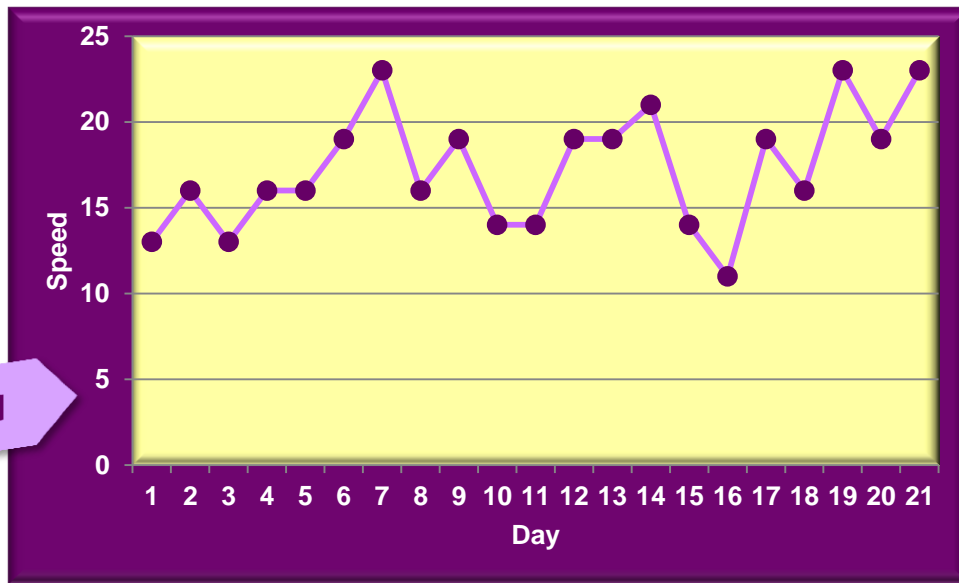

**\*NOTE:** The median is more robust in measure the average of the skewed data compare to mean. Thus we always use the median to measure the average of skew data.

# TIME-SERIES GRAPH

A **time-series** graph is a graph of time-series data, which are **quantitative data** that have been collected at different points in time (yearly, monthly, quarterly, weekly, etc.).

EXAMPLE: The daily wind speed (km/h) in Sepang Malaysia

| Day   | 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  | 9  | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 |
|-------|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| Speed | 13 | 16 | 13 | 16 | 16 | 19 | 23 | 16 | 19 | 14 | 14 | 19 | 19 | 21 | 14 | 11 | 19 | 16 | 23 | 19 | 23 |

TIME-SERIES GRAPH

# EXAMPLE 2.23

Table below shows Malaysia's exports (RM million) of tyres from 2002-2011.

| Year    | 2002   | 2003   | 2004   | 2005   | 2006   | 2007   | 2008   | 2009   | 2010   | 2011   |
|---------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| Exports | 164.01 | 191.84 | 164.43 | 321.63 | 292.64 | 243.89 | 245.02 | 428.20 | 301.73 | 413.65 |

Construct a time-series graph for the data above.

**SOLUTION**

# THANK YOU

## END OF CHAPTER 2 (PART 2)
