# Chapter Description

- **Aims**

- Enable students to understand the role of distribution and the network design in supply chain.

- **Expected Outcomes**

- Students should be able to
  - Determine the role of distribution in supply chain
  - Discuss factors related to distribution network design
  - Elaborate network design

# Chapter Outline

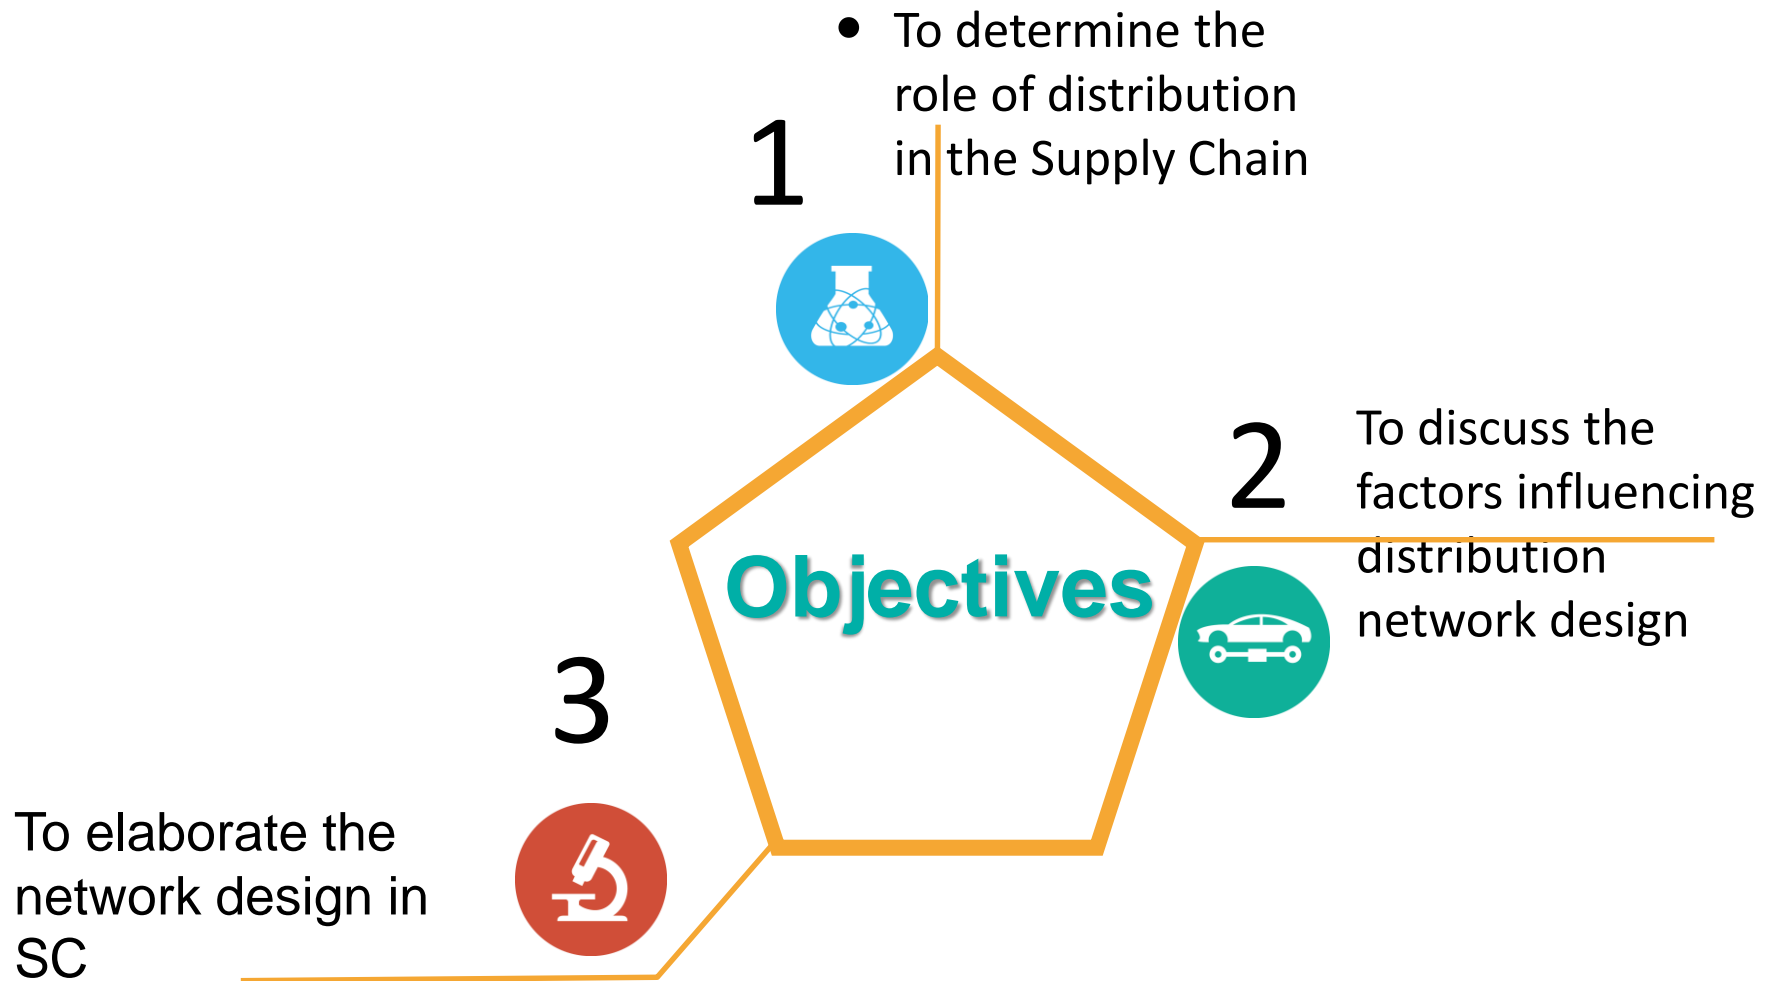

5.1 Role of Distribution

5.2 Factors Related to Designing Distribution

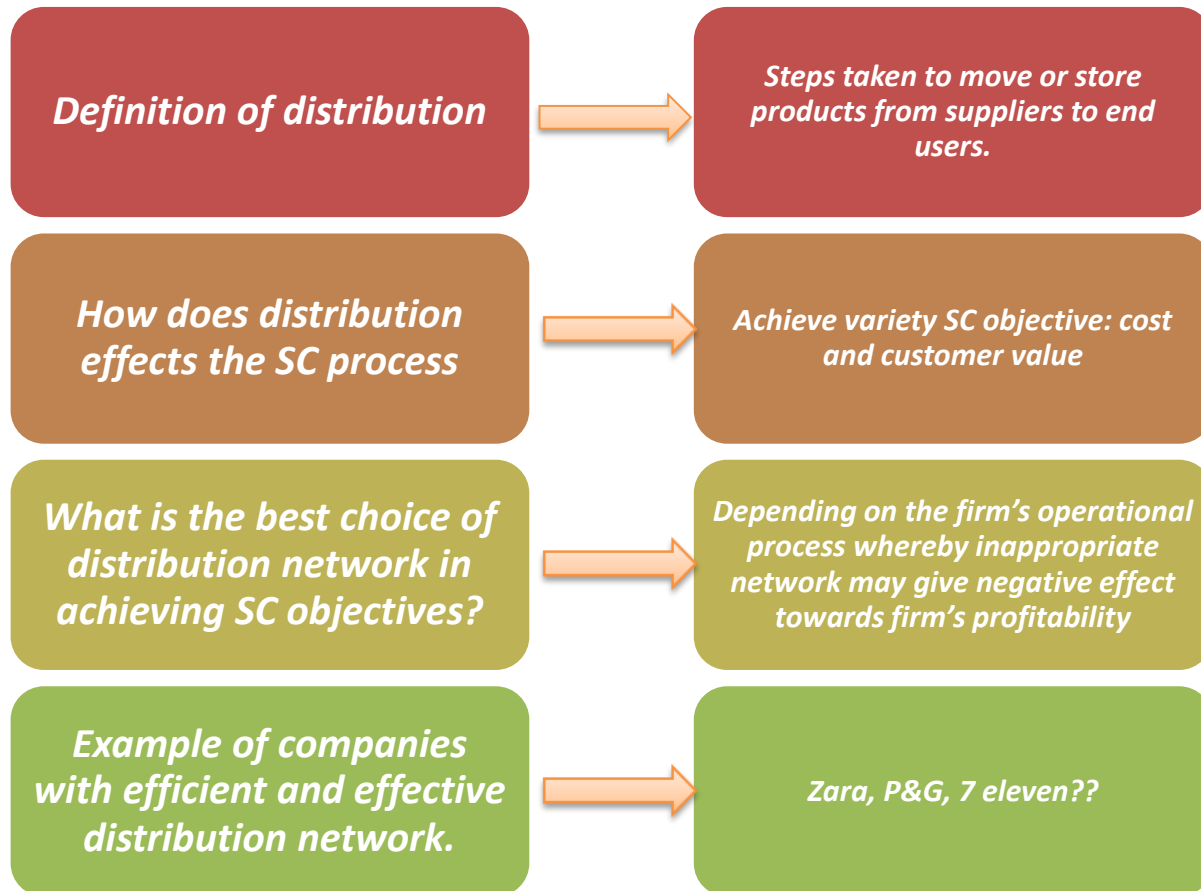

5.3 Network Design

# LEARNING OUTCOMES

# Distribution: Roles in a SC

# Distribution Network Design: Factors involved

Two main dimension need to be focused:

- Value delivered towards customer needs
- Cost involved in meeting customer needs

# Distribution Network Design: Factors involved

Elements of customer value influenced by network structure:

- Response time
- Product variety
- Product availability
- Customer experience
- Time to market
- Order visibility
- Returnability

Supply chain costs affected by network structure:

- Inventories
- Transportation
- Facilities and handling
- Information

# Network Design

In designing a distribution network, an organization needs to emphasize on TWO (2) important decisions

- Where should the customer pick up their goods?
  - ***at the designated location or***
  - ***directly to the customer's location***
- Should the products go through
  - ***the middleman or***
  - ***intermediate location***

# Conclusion of The Chapter

- **Conclusion #1**
  - Generally, distribution is the movement of products from the supplier to the end user.
    - Elaborate network design
- **Conclusion #2**
  - Decision related to distribution network design will effect the customer value as well as the SC cost.
- **Conclusion #3**
  - Distribution network design enable a firm to operate effectively and efficiently through the identification of nature of the business and how responsive they are to their customers.
