

	<b>COURSE:</b> Mobile Application Development		<b>MARKS:</b>  /10	
	<b>TOPIC:</b> All			<b>CODE:</b> BCS3283
	<b>LAB ASSESSMENT</b>	<b>NO:</b> 2		<b>DURATION:</b> Lab Implementation

Individual assignment requirements:

In order to increase the UMP students' knowledge, you have been asked to design a mobile application for the mobile application development subject. This application should be able to cover the subject knowledge as chapters and each chapter ends with a quiz practice. The quiz will consist of multi questions that are randomly generated from a bank of questions saved in a database. Based on that, the following requirements are needed for the application:

- i. The users should be able to sign up/log in using Google account or any email account.
- ii. The users should be able to use tools to highlight important text information and add comments over the highlighted text.
- iii. The users should be able to connect to references by clicking on any reference link.
- iv. The users should be able to view the score and the correct answers at the end of each quiz.
- v. The users should be able to contact the developer and rate the application performance.

Based on the requirements, design a complete application using storyboard (**FIVE (5) to SEVEN (7) windows only, no more or less**). The design must show the graphical user interface details, connections, and database usage as well.

1) .
